DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-18, drawn to a spermine:peptide-based surfactant compounds.

Group II, claim(s) 19-31 drawn to a method of introducing DNA or RNA polynucleotides into eukaryotic or prokaryotic cell.

Group III, claim 33, drawn to a method of preparing spermine:peptide-based surfactant compounds.

If either Group I or II is selected, applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 1653

the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking groups I-III appears to be the spermine:peptide based surfactant compounds. However, Ekrami, H. et al. teach a spermine:peptide based surfactant compound. Ekrami, H et al. teach a spermine-conjugated Bowman-Birk inhibitor that accumulated to a greater extent in the lungs and the liver compared to the unconjugated protein.

Therefore, the technical feature linking the inventions of groups I-III does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

The special technical feature of Group I is considered to be spermine:peptide-based surfactant compounds.

The special technical feature of Group II is considered to be a method of introducing DNA or RNA polynucleotides into eukaryotic or prokaryotic cell to achieve an antisense knock-out effect, for gene therapy, for genetic immunization, for use in anti-infective therapy.

The special technical feature of Group III is considered to be a method of preparing spermine:peptide-based surfactant compounds.

Accordingly, Groups I-III are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

3. A telephone call was made to William Majarian on December 16, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
